

HighJump Warehouse Management in the Cloud

Is your IT team overloaded? Are you concerned about being able to raise the capital investment needed to install a warehouse management system (WMS)? Does it seem like your software applications are always a version behind? Perhaps you're frustrated with slow system performance?

What if you could leave all the technology administration to HighJump and focus more time on running your business? HighJump Software now offers its warehouse management system in a cloud deployment model, eliminating much of the cost and administration time necessitated by installed software.

Full Warehouse Management Features – Lightened IT Load

Just like the installed version, HighJump WMS in the cloud provides the means to ensure fast, accurate fulfillment through directed, optimized workflow. The HighJump warehouse management system gives companies across industries a foundation of best practices for receiving, put-away/flow-through, inventory management, order processing, replenishment, pick/pack, loading and shipping, as well as the ability to build their own industry-leading businesses processes using our adaptability tools. The only difference is that HighJump WMS in the cloud is hosted in a secure HighJump data center instead of being installed on-site at your business.

Faster Implementations and Worry-Free Reliability

On-premise software requires space, electricity, cooling, bandwidth, hardware and trained IT staff to install the systems and perform upgrades and routine maintenance. Your staff also needs to create failover environments in case of server failure. On-demand systems eliminate these costs and maintenance hours.

Why HighJump WMS in the Cloud?

- Rapid, low-risk installations
- No capital expenditure required
- No hardware/server upgrade purchases
- Disaster recovery services back up your data in case of catastrophic server failure
- Instantly reduce on-premise software costs
- Upgrades and routine maintenance performed for you by HighJump experts
- One simple monthly payment for your IT needs. You are no longer required to manage hardware vendors, hardware support contracts and insurance on your hardware

Trust HighJump for Reliable, Scalable Power

You simply “plug in” to the HighJump data center and quickly scale capacity, both up and down, to accommodate seasonal spikes, changes in demand or a growing operation. The HighJump data center is:

- Highly reliable and secure - SaS70 certified
- Scalable and elastic – your WMS can automatically scale itself up and down depending on its needs
- Completely controlled – you have complete control of your system and can access and interact with your instances as you would with any machine
- Equipped with built-in disaster recovery

Grow Into Enterprise-Level WMS

Your business may not require a laundry list of complex warehouse management features right away. HighJump WMS in the cloud delivers just the solution set you need to run your business and acclimate to a system. When you are ready, HighJump Software can help you leverage more complex warehouse management capabilities such as labor management, slotting and yard management.

Ongoing Cost: On-Premise vs. In the Cloud Solutions
